PROFESSIONAL SUMMARY

Analytics-focused professional with 3 years of experience across technical analysis, microservices, data validation systems, reporting solutions, and cross-functional delivery. Skilled in SQL-driven data analysis, dashboarding, requirements gathering, UAT, backlog prioritization, and translating business requirements into feasible technical solutions. Experienced in stakeholder coordination, rapid prototyping, and aligning product, engineering, customer, and project delivery workflows.

WORK EXPERIENCE

Assistant Manager — Star Health and Allied Insurance Co. Ltd. *Sep 2023 – Feb 2026*

- Document Data Pipeline: Identified a manual document-upload bottleneck causing daily data discrepancies. Defined SLA targets, data validation rules, and fault-tolerance requirements. Conducted User Acceptance Testing and validation cycles before rollout to ensure production readiness — result: 99.2% automated success rate, 80% reduction in manual processing.
- Policy Data Analysis & Validation: Acted as the primary point of contact between underwriting and engineering, translating business rules into a structured validation engine — managed requirements and prioritization for this workstream using JIRA. Used SQL across MySQL, with AI-assisted query development and documentation, to identify data anomalies, escalate risks, and flag trends. Reduced policy rejections by 35%.
- Multi-source Data Integration: Scoped an API orchestration layer for retail and group insurance flows. Analysed transaction failure patterns across data sources, identified root causes, and implemented fixes that improved integration efficiency by 60%+.
- Reporting & Dashboard Analytics: Defined persona-based KPI requirements with operations and sales stakeholders, ensuring reporting outputs aligned with internal data governance and quality standards. Built dashboards using MongoDB aggregation and SQL, with Excel-based summaries shared with business teams — replacing bespoke manual reporting with standardised, real-time visibility.

Technical Analyst — Nexusolve *Mar 2026 – Sep 2026*

- Technical Solutioning: Translated business requirements into technically feasible solutions by understanding workflows, constraints, and platform capabilities.
- Cross-functional Collaboration: Bridged communication and workflows across engineering, product, customers, and other stakeholders to keep requirements, dependencies, and execution aligned.
- Rapid Prototyping: Developed prototypes and proof-of-concepts using AI-assisted tools such as Cursor and Lovable to validate ideas and accelerate solution development.
- Project Delivery: Tracked requirements, dependencies, timelines, and deliverables to ensure execution remained aligned with project objectives and stakeholder expectations.
- Sales & Solution Support: Supported upselling by identifying additional solution capabilities for different workflows, with a focus on scalability and broader platform adoption.

SKILLS & PROFICIENCIES

- Data & Analytics: SQL (MySQL), MongoDB Aggregation, Data Analysis, KPI Definition, Reporting & Dashboards, Microsoft Excel, Grafana
- Testing & Delivery: UAT & Regression Testing, Requirement Backlog Prioritization, Data Governance Alignment, Agile/Scrum, JIRA
- AI-Augmented Workflow: AI-assisted SQL query development, data analysis, technical documentation, Cursor, Lovable (prototyping)
- Stakeholder & Communication: Requirement Gathering, Stakeholder Management, Cross-functional Collaboration, Business Reporting, Data Storytelling
- Technical: Java, Spring Boot, Apache Kafka, Redis, MySQL, MongoDB, REST APIs, Docker (basic), Git, Postman, Linux

EDUCATION

B.Tech – Electronics, Telecommunication & Computer Science (Honors in Robotics & Automation)
Symbiosis Institute of Technology, Pune, MH | 2019 – 2023
